MAKING UP YOUR ORDER

Place orders early—preferably **NOW**—for spring deliveries. This will prevent delay of shipment after plants are ready.

We ship by express—purchaser to pay all transportation charges.

When purchaser wishes stock to be shipped by Parcel Post, please inclose postage. Otherwise we will ship by express.

Water lily roots weigh about one pound each when packed ready for shipment.

Our prices are quoted net and cash is expected with order

The CULTURE of WATER LILIES

Very Important

Three conditions that are necessary for the Water Garden.

First—SUNSHINE. The water garden must have at least half of the day's hot sun.

Second—UNDISTURBED WATER. Water lilies will not grow in running water. Just fill up the evaporation. Do not change the water in the Pool during hot weather.

Third—PLENTY OF GOOD SOIL. Water lilies are heavy feeders and should have at least four cubic feet of well fertilized soil to each plant. This amount will carry them through the third season.

Preparation—Any good garden soil mixed with about one-fifth of well rotted cow manure; spread over the floor of the small pools to a depth of 10 to 12 inches; cover the top with one inch of sand and level off well.

We are always glad to give any advice regarding the construction and cultivation of water gardens.
